

One infrastructure. Fifteen platforms. A national architecture, locally grounded.

TCAF is the nonprofit for nonprofits, residents, and communities to thrive. We bring the tools, the data, and the funding knowledge — so organizations and families can execute and do the work.

50

STATES — ONE ARCHITECTURE

IGN — Initial Guidance & Navigation. TCAF exists to help people and the organizations serving them move from fragmented need to coordinated action. We meet people where they are, at their own pace and level of readiness — using data, AI, research, and human judgment to guide the next step and redirect when conditions change. We do not stop at needs assessment. We support the whole cycle: Research → Planning → Preparation → Execution → Continuous Assessment → Implementation → Scale Up → Scale Out.

Infrastructure for communities that are usually asked to prove their need over and over.

Families experience housing, health, education, safety, workforce, and benefit barriers as one connected reality. Nonprofits are often forced to collect the same information in separate systems, tell the story again to each funder, and measure only the part of the work that fits one grant.

ThriveUp and TCAF connect those pieces. The goal is not a bigger dashboard. The goal is a more truthful path from community voice and public evidence to a fundable plan, human action, measurable outcomes, and learning that improves the next cycle.

Why the architecture is integrated

- **One community story:** a place is not reduced to one indicator or one program.
- **Less administrative burden:** a nonprofit can reuse a verified brief, evidence trail, implementation plan, and outcome baseline.
- **Better decisions:** evidence and lived context sit beside the model, with uncertainty and source limits visible.
- **Continuity:** research, funding, service delivery, and reporting do not disappear into separate silos after a grant is awarded.

HOW THE TOOLS INTEGRATE

Integration means a deliberate handoff between specialist tools — not copying everything everywhere and not asking one chatbot to pretend it can do every job. A request carries its geography, purpose, source provenance, data-quality status, and disclosure labels. A partner receives only the package the user or authorized organization chose to send.

● HEALTH EQUITY & WELLNESS 4 platform families

Whole-Person Health Ecosystem

➤ [Visit \(opens in a new tab\)](#)

Clinical screenings (C-SSRS, PHQ-9, GAD-7, PCL-5), safety plans, crisis tools, and 20,670+ resources across 2,091 community groups. Mental wellness, safety planning, and practical support that recognizes health is connected to every part of life.

mentalwellnesssupport.net

Sankofa Health Network —

HerHealth Matters & Maternal Health

➤ [Visit \(opens in a new tab\)](#)

Health and wellness gateway connecting people to culturally responsive behavioral-health and community care resources, with feminine-health and maternal-health pathways, preventive screening navigation, hormonal wellness, prenatal and postpartum support, doula and CHW matching, and family-centered planning.

herhealthmatters2.com

MaleHealth Matters

➤ [Visit \(opens in a new tab\)](#)

Preventive health information, cardiovascular wellness, screening navigation, behavioral-health support, and peer mentoring and connection for men and their families.

malehealthmatters2.com

SafeCogniCare

➤ [Visit \(opens in a new tab\)](#)

TBI, ADHD, dementia, and peripartum cognitive assessments (MoCA, MMSE), safety protocols, crisis decision trees, and longitudinal care coordination for individuals with cognitive complexity.

safecognicare.com

● EDUCATION & YOUTH 3 platforms

ISSS — Integrated Supports for Thriving Youth

➤ [Visit \(opens in a new tab\)](#)

MTSS engine with Thrive Scores, early warning indicators, multi-stakeholder coordination, and data-driven student support at scale. Connects teachers, families, and service providers in one shared view.

implementationineducatio.com

Perfectly Different ➤ [Visit \(opens in a new tab\)](#)

Neurodiversity-affirming support for autism, ADHD, and AuDHD — IEP/504 plan builder, executive function coaching, sensory tools, and family navigation designed around the learner's strengths.

neurodifferentassistant.app

Better Science Lab / RPLICE

➤ [Visit \(opens in a new tab\)](#)

Implementation science in action — CFIR, RE-AIM, and EPIS frameworks, a curated evidence-based practice registry of 49+ studies, and research translation tools that turn peer-reviewed findings into community programs.

www.bettersciencelab.com

● VETERANS & WORKFORCE 2 platforms

Mission Transition (M2C)

➤ [Visit \(opens in a new tab\)](#)

Minority Center of Excellence

➤ [Visit \(opens in a new tab\)](#)

Military-to-civilian bridge for veterans and families — MOS translation, benefits navigation, identity support, transition planning, and community connection. Targets the critical first 12-month risk window post-separation.

vetmissiontransition.com

656,794 SAM.gov records, 14 AI-powered procurement tools, dual-AI proposal review, and a certification wizard for 8(a), HUBZone, WOSB, and SDVOSB designations. Built for minority-owned and disadvantaged businesses.

minoritycenterofexcellence.com

● SAFETY & COMPLIANCE 2 platforms

SafeReport [↗ Visit \(opens in a new tab\)](#)

Mandatory reporter system designed for 50-state policy coverage, with a 7-stage incident lifecycle, tamper-evident audit trails, and court-admissible evidence packaging. Purpose-built for child welfare, elder care, and institutional safety compliance.

safereports.net

Talk Your Talk [↗ Visit \(opens in a new tab\)](#)

Dialect- and sign-aware communication platform supporting 89 spoken languages and 18 sign languages with real-time speech-to-text and culturally responsive translation. Ensures no one is excluded due to language.

talkyourtalk.net

● COMMUNITY & RESOURCES 2 platforms

LifeBridge [↗ Visit \(opens in a new tab\)](#)

Virtual 211 available 24/7 — resource navigation for housing, food, healthcare, crisis support, and life event guides. Draws from 20,670+ verified resources, with coverage varying by location and a national architecture built for U.S. communities.

lifetransitionsaid.org

ThriveUp Academy [↗ Visit \(opens in a new tab\)](#)

The anchor platform — AI-powered workforce readiness curriculum, career pathways, trade simulations, 4-engine AI, community banking, and the full TCAF infrastructure for learning and community development.

thriveupacademy.com

● FINANCE & COMMERCE 1 platform

TradeSparkFinance [↗ Visit \(opens in a new tab\)](#)

Financial intelligence for community-serving traders and small investors — market access, financial education, and tools built for people who have historically been locked out of financial markets and wealth-building systems.

tradesparkfinance.com

● FUNDING & GRANT EXECUTION 1 platform

GrantPathPro [↗ Visit \(opens in a new tab\)](#)

Funding intelligence and execution support for nonprofits and community-serving organizations — opportunity qualification, grant writing and proposal drafting, budget development, compliance review, submission tracking, funder relationship management, post-award reporting, and recomplete planning.

A community is more than a percentage.

The Community Impact Conductor turns a ZIP code, city, county, or multi-county request into a place-based brief that can be understood by a resident, used by a community health worker, acted on by a nonprofit, and reviewed by a funder. It connects observed conditions to possible intervention windows without presenting a model as if it were a measured fact.

The depth is intentional: ten systems domains, at-risk population pathways, policy context, evidence-backed interventions, a historical receipt, a 25-year scenario, side-by-side geography comparison, and a narrative that explains how the pieces relate.

Baseline: What is observed?

Community conditions such as poverty, unemployment, insurance coverage, housing cost burden, educational attainment, family structure, language access, disability, age, and other disclosed indicators are anchored to the resolved Census geography.

Systems view: Where are the pressure points?

Ten domain scores organize the baseline into Health Access, Mental Health, Benefits Access, Housing Stability, Early Childhood, Education, Justice & Safety, Workforce, Foster & Aging, and Rural & Remote. Scores are decision-support signals, not a judgment of residents.

Story view: How do conditions connect?

The Domain Web shows relationships across systems; the Skyline Map compares neighboring ZIPs; Particle Flow makes the difference between investing and not investing visible as a population pathway; the narrative explains the “why” behind the pattern.

Time view: What has happened and what could happen?

The Historical Timeline uses multiple ACS vintages when available. The Cascade Waterfall shows a 25-year TCAF scenario with intervention windows. Historical outputs and forward scenarios are labeled separately from observed data.

Action view: What can a nonprofit do next?

The brief points to evidence-based programs, policy actions, resource pathways, implementation questions, and possible funding alignment. It can become a shareable community brief, a planning conversation, or authorized context for a grant pursuit.

Why a connected model matters

Most dashboards stop at “the rate is high.” Chainweb asks what is connected to that condition, what evidence supports the relationship, how long the relationship may take to show up, and where an intervention can change the path. It links domains such as early childhood → education → workforce → economic stability, and housing instability → health access, while preserving the evidence behind each relationship.

Each relationship in the coefficient library carries a direction, effect size, time lag, unit, population notes, confidence level, and an evidence citation. The engine then compares a modeled “without intervention” pathway with a modeled “with intervention” pathway. These are planning scenarios — not promises, invoices, or observed savings.

EVIDENCE

What supports the link?

Peer-reviewed studies, named evidence programs, and policy intelligence are retained as the basis for the relationship.

CAUSALITY

What connects?

Domain-to-domain pathways make upstream conditions and downstream consequences visible instead of treating each program as isolated.

TIMING

When could change appear?

Lag years and milestones keep the story realistic; prevention, implementation, and outcome windows are not collapsed into one date.

DECISION SUPPORT

Where can action begin?

Nonprofits can use the chain to prioritize a reachable intervention, identify partners, choose measures, and explain the logic to a funder.

SOURCES OF INFORMATION — TRACEABLE BY DESIGN

ThriveUp does not treat “AI said so” as a source. Different tools use different source classes, and the output identifies what was observed, what was derived by TCAF, what was modeled, and what was synthesized. Source coverage and freshness can vary by geography; the brief carries warnings instead of hiding a gap.

SOURCE CLASS	WHAT IT CONTRIBUTES	HOW IT IS USED
U.S. Census Bureau ACS 5-Year Estimates	Observed community and household indicators at the resolved ZIP/ZCTA, county, or multi-county grain.	Baseline demographics, economic conditions, access barriers, multi-vintage historical comparison, and the disclosed geography in the community-evidence contract.
CDC PLACES and public health sources	County-level health and prevention indicators, including access, mental-health, chronic-condition, and food-insecurity signals where available.	Health-domain context and specialized health tools; the system keeps the source and geography limitation visible.
HRSA, USDA ERS, CMS and other public agency datasets	Provider access, rural health, telehealth, agriculture, workforce, and service-desert context for specialized engines.	Added when a tool's question requires more than the ACS baseline; not silently substituted for Census data.
Funding intelligence sources	SAM.gov, Grants.gov, USAspending.gov, and curated state, foundation, and corporate sources.	Opportunity discovery, funder-fit analysis, proposal planning, budget context, and pursuit tracking — separate from community facts.
Better Science Lab / RPLICE	Live implementation-science research, framework libraries, evidence-based practices, research translation, and implementation planning.	CFIR, RE-AIM, EPIS, fidelity, action plans, outcome baselines, and research-backed intervention design.
Chainweb Evidence Library and Civic Signal	Cited causal relationships, evidence programs, jurisdiction policy history, and authenticated partner lessons.	Connects evidence to community conditions and lets policy or implementation learning return to the system through a verified partner path.
Community and partner knowledge	Organization-entered context, service capacity, referrals, implementation experience, and community voice when intentionally provided.	Improves relevance and action planning. Personal or protected records are not exposed in aggregate public stories.

WHAT WE MEASURE — FOUR DIFFERENT KINDS OF TRUTH

1 · OBSERVED What is happening? Published indicators at a disclosed geography: poverty, unemployment, insurance coverage, housing burden, education, family structure, language access, disability, age, health context, and available service signals.	2 · DERIVED What does the pattern suggest? Domain scores, grades, urgency levels, key gaps, at-risk population pathways, geography comparisons, intervention priorities, and policy strengths or gaps calculated from the observed inputs.	3 · MODELED What might the future cost or change look like? Historical accumulation and forward counterfactual, intervention, net-savings, and ROI scenarios using Chainweb relationships and TCAF assumptions. These are explicitly not Census-verified expenditures or guaranteed savings.	4 · IMPLEMENTED Did the response reach people and work? Reach, effectiveness, adoption, implementation quality, maintenance, fidelity, milestones, outcome baselines and targets, referrals, enrollment, completion, and reporting measures — selected for the program rather than invented as one universal score.
--	---	---	--

Honesty boundary: “not yet reported,” “unavailable,” and “<5” remain meaningful results. Small cells are suppressed, modeled values are labeled as modeled, and an AI narrative is synthesis — not a replacement for the source, a participant, a clinician, a CHW, or a community’s own voice.

A nonprofit should not need a data department, a grant writer, an evaluator, and six disconnected subscriptions just to explain why its work matters. TCAF provides a shared operating backbone while leaving program decisions and community relationships with the people doing the work.

- 1 Locate the need.**

Start with a place, population, service gap, or community question. Generate a source-labeled baseline instead of beginning with a generic narrative.
- 2 Make the story understandable.**

Use the community brief, maps, domain web, historical view, causal chain, comparison, and narrative to explain what the numbers mean for real people.
- 3 Choose an intervention.**

Use RPLICE evidence, CFIR/RE-AIM questions, Chainweb relationships, local capacity, and community voice to select an approach that fits the setting.
- 4 Build the pursuit.**

Match the plan to funding intelligence, funder language, required outcomes, budget logic, and compliance needs. GrantPathPro helps with grant writing, proposal drafting, budget development, compliance review, submission tracking, and funder relationship management.
- 5 Execute with partners.**

Send only an explicitly authorized context package through the protected handoff. Coordinate referrals, service delivery, milestones, and responsibilities across the organizations involved.
- 6 Measure and report.**

Establish baselines and targets, track implementation and outcomes, produce funder-ready evidence, learn what changed, and improve the next cycle rather than starting over.

The nonprofit value proposition

TCAF is a backbone, not a gatekeeper. We help a small or growing organization see the full context, translate its work into a credible story, find the right funding lane, write and manage the pursuit, measure what matters, and keep community dignity at the center. The platform strengthens capacity; it does not claim to own the community story or guarantee an award.

WHAT TCAF PROVIDES

- 

Tools & Technology

Ready-to-deploy platforms and the ability to build what doesn't yet exist for a community's specific need.
- 

Data → Information

Raw data transformed into actionable intelligence — Census, SDOH, grants, and real-time community signals — meeting people where they are.
- 

Funding Intelligence

Live funding opportunity engine, AI fit-scored to partner profiles — tracking opportunities nationwide and aligning them to the community partners we serve.
- 

Research & Evidence

Implementation science applied at every level — CFIR, RE-AIM, EPIS — so every tool and intervention is grounded in what actually works.
- 

Teaching to Fish

We give tools AND teach how to use them. Capacity-building, workforce readiness, and continuous education are built into every platform.
- 

Policy & Advocacy

Informing and influencing policymakers and stakeholders with data-backed community impact reports, equity loss analysis, and systemic-change evidence.

Four production AI engines — routed intelligently by task, audience, and context — with ethical preamble applied to every call.

- Claude (Anthropic)
- GPT-4o-mini (OpenAI)
- Gemini 2.5 Flash (Google)
- DeepSeek R1

Delivered via OpenRouter with automatic model rotation. All AI responses are wrapped in TCAF's Ethical-EI Preamble — 8 principles covering equity, honesty, anti-fabrication, trauma-informed language, IGN mindset, and writing-mode awareness.

WHO WE SERVE — ALL FOUR, ALL EQUAL

Community Members & Residents Tools, benefits navigation, safety planning, and readiness support — in 107 languages, at their own pace and level of comfort.	Nonprofits & Community Organizations TCAF is their backbone — providing infrastructure, capacity-building, funding intelligence, evaluation, and research translation so they can focus on mission.
Funders & Grant Reviewers Data, outcomes, evidence-based program design, and accountability systems that make evaluation straightforward and impact visible.	Policymakers & Stakeholders Research, advocacy data, equity-loss analysis, and systemic-change evidence that makes the cost of inaction impossible to ignore.

MULTI-DISCIPLINARY IDENTITY

TCAF holds all lenses simultaneously — none sacrificed: **Implementation science + behavioral science · Social work / CHW empathy model · HR & policy expertise · Computer engineering · Pedagogy of an educator · Legal system & criminal justice · Patience of a parent · MBA + community development innovation** across urban, metro, and suburban contexts.
